

Expert's advice on laser tattoo removal

Tattoo after sometime start looking ugly or in some cases causes skin disorders. They need to remove. Various techniques have started up to for their removal. One of them is laser treatment. It is considered to be best and effective treatment. **People's desire for safe tattoo removal treatment** People are looking for effective and safer means to remove tattoos. In the past, tattoo removal involves a costly surgery and that too would leave an ugly scar on the skin. But the process of laser tattoo removal has fulfilled their desire of easy and safe removal of tattoo. **Laser tattoo removal** Laser tattoo removal is a medical procedure in which the use of specialized medical laser is done. It breaks up the pigments of the tattoo and removes the ink by the series of treatments. The most advanced laser used in tattoo removal is Q-switched dual wavelength as it removes both light colored and dark colored tattoos. **Working of lasers** The rapidly emerging pulse from the laser hits the tattoo pigmented cells such that surrounding unaffected tissue is not damaged. It is studied that the side effect in the form of swelling or redness can be due to removal of ink from the affected area. In case of darker tattoos, the skin may have some blisters for few days. But it also the part of normal healing process. **Is it easier to remove older tattoos or the newer ones?** Generally it is easier to remove older tattoo as the pigments in the skin have weakened because of its exposure to sun. So it makes the work easier for laser. Secondly the older tattoos have faded up, thus get removed easily. **Is the treatment painful?** It is painful to remove tattoo. The short pulsed light from the laser enter into the skin just like a needle sting. To reduce the pain, physician might take the help of some anesthetic ointment. **Side effects of the treatment** There can be some side effects of laser treatment. It might result in hypo pigmentation in which there is an excessive fading of tattoo or hyper pigmentation leading to excessive color on the skin. There can also be scar formation or sun burn that might fade with the time and skin might turn normal. There can be some more side effects that are generally experienced in the form of redness and swelling in the area for the several days after the treatment. **Cost of tattoo removal** No technique removes the tattoo in a single treatment. The process of tattoo removal requires multiple treatment and that can be decided only in consultation with some good dermatologist. Physician looks into complexity, size, location, nature and depth of the tattoo on your skin and other factors before deciding the cost of treatment.
