

## Legalizing the use of cannabis seeds in UK

Legal use of cannabis is nothing new.&nbsp; Graine Cannabis has been in use for textiles, medicine and other recreational endeavors in United Kingdom since 1928. However its classification has become a question of hot debate not only in UK but across the globe.

There is no consensus opinion as on date on the use of cannabis seeds and its impact on human health.&nbsp; Consequentially there is also no consensus on punishment to be dealt out to the users of the drug.&nbsp; In fact it is not even clear whether the use of the drug would be considered a punishable offence.

### Gradation of cannabis seeds

Till date cannabis in UK and many other countries are classified as &ldquo;c&rdquo; grade drug.&nbsp; This means graine de cannabis is equivalent to the mild drugs like the slimming tablets and anabolic steroids. In England the drugs are classified under the 1971 Act there. After the 2004 amendments to the act, personal use of cannabis is no more considered as an offence.

Prohibitions that have been imposed in connection with the use of cannabis are of recent origin.

### Legal aspects of use of cannabis

Legally you cannot possess or produce or even supply cannabis.&nbsp; In case you are caught possessing cannabis you may end up with two years imprisonment and fine. However possessing a tiny quantity for personal use will not be punishable.&nbsp; The penalties are stringent for supply of drugs as it comes to 14 years. You cannot also produce marijuana or such drugs legally.

The prohibitions are only of recent origin. Till the year 1928 cannabis was produced legally and used too in Great Britain. Even the monarch like Queen Victoria used it from time to time.

History indicates that whenever prohibitions have been imposed on cannabis it has resulted in political upheavals.&nbsp; When Pope prohibited it, Queen Elizabeth issued a decree permitting the production of graine de cannabis all over the country.

### Confusion to day

People across the globe are largely confused over the impacts of Graine Cannabis.&nbsp; It is unclear how much harmful effect it could have or whether it has any harmful affect at all.&nbsp; One thing is certain; the classification does not matter much for the person who has problems with the drug.

The best course therefore could be use of the drug in such manner that whatever harmful effect it creates can be effectively neutralized.&nbsp; Cannabis does not cause equal problems for all.

Some people feel the impact more than others owing to their own physical states.&nbsp; At the same time you cannot ignore the fact that cannabis has several uses in medicine, recreation, and other aspects of human life that could be useful if handled with care.

### Conclusion

Though the 1971 Act banned used of cannabis for medical purposes, experiments and research has revealed that they may serve some very useful purposes in medical science.&nbsp; Especially for trauma management cannabis based drugs have proven very effective. You may not also ignore the fact that graine de cannabis is the most popular illegal drug in entire United Kingdom.

Nearly 42% of the youth in the age group of 16-29 are accustomed to use it.&nbsp; It is most unlikely that all of them will immediately stop using the drug.&nbsp; Therefore the safe use of cannabis is of utmost importance for all concerned.
