

The hottest product in bathroom design - vessel sinks

In the arena of bathroom designs today vessel sinks have become the hottest item. It could be open base or set on a pedestal. It might also be in furniture like vanity. In any case vessel sinks are indispensable part of your bathroom designs and arrangements. There is perhaps no such room excepting the kitchen that is visited maximum by the visitors as the powder room. You require vessel sinks for the powder room as well as your own private retreat.

**Vessel sinks on cradle and materials for manufacture **

Best vessel sinks are those that are well saddled on the cradle. Such cradles could be made of iron or the same material as the vessel sinks. You can have collection of beautiful and very open-based designs with unique cradles. When the sinks are firmly placed they add elegance to the place where they are mounted like the kitchen, drawing room and lounge.

Since the requirements, taste, paying capability of the customers vary greatly, the best job for the manufacturers would be to design real unique vessel sinks and other items. In addition the sinks remain distinctive even when taken outside and no one will fail to notice the same.

Vanities may not be manufactured with particular items like steel, ceramic or such things. There are also wood furniture vanities. However the sink has to be material that will not rot coming in contact with water and porcelain, ceramics and such other materials are ideal for the vessel sinks. Therefore when it comes to selecting the material you will have to consider the formation of your kitchen and few other factors.

**Ceramic, glass, or stone vessel sink **

The question for you is whether ceramic, glass or stone vessel sinks are the best choice for you. It is a fact that addition of new vanity or installing good looking vessel sink could cause instant transformation in the looks of your bathroom and overnight your bathroom can become contemporary from the traditional. The factors that contribute to making decisions on the items to be used are the materials for the vessel sinks and faucet type.

**Stone is the favorite **

Coming to the materials, natural stone could be anything from travertine and onyx to granites and marble. The disadvantages are that they are extremely heavy and expensive. They also require more care than other materials. The only plus point is their natural beauty. Glass is lightweight and inexpensive. They will provide a wide variety of colors and sizes.

There is also no maintenance cost. But glass is brittle and replacements could be too many. Porcelain is the most inexpensive and does not require much maintenance. They are also heat resistant and come in unique colors. Metals could be copper, bronze, brass, and nickel. The price of material and maintenance are both high. However for commercial units it could be better choice than the bathroom vanity.

Finally we come to the faucet that is the important part of the whole process. For convenience you can mount it on the cabinet or the wall and at times they come along with the cabinet.
